

Designed for **zoom**

DTEN ON

Your all-in-one collaboration device for Zoom

A dedicated Zoom Rooms appliance

SOLUTION BRIEF

The DTEN ON delivers a superior Zoom meeting experience with advanced audio, video, and real collaboration technology.

Key Features

- + All-in-one collaboration appliance designed exclusively for Zoom
- + Ultra responsive whiteboarding and real-time annotation on a 4K touch display
- + Crystal Clear audio with DTEN Audio AI with noise reduction
- + Life-like video with smart camera technology provides the optimal view of the room
- + Plug and play with easy set up, right out of the box

The right video conferencing technology makes all the difference in how people and teams connect and collaborate.

DTEN ON is real collaboration at its best

The DTEN ON is a single device with a built-in, locked computer running Zoom Rooms software. The 55" multi touch display combines video conferencing, phone calling, screen sharing, whiteboarding, and real-time annotation in a deceptively simple touch-to-start solution for Zoom

Vibrant video brings meetings to life

- DTEN Smart Camera with life-like face-to-face video lets you see and be seen clearly
- Move about the room knowing the camera will always keep you in frame with an optimal view of the room. Advanced smart 4K camera technology with auto framing and ePTZ is designed for best-in-class video experience

Collaboration is interactive.

- Illustrate your ideas with whiteboarding on a hyper responsive edge-to-edge 4K touch screen display. The multi-touch input allows multiple participants to illustrate their ideas at the same time
- Share whiteboarding slides with others after the meeting. Share content and annotate documents and presentations in real-time to capture every edit

Crystal Clear Audio is essential for productive meetings

- Rely on DTEN ON's crystal clear audio, powered by DTEN Audio AI
- DTEN's signature 16-microphone array optimizes and picks up sounds up to 60 ft. and significantly reduces background noise on the fly

Take your DTEN ON out of the box, simply plug in power, and it just works. Then push updates through the Zoom admin portal for hassle-free maintenance.
